

# WHAT SETS EDGETECH APART?

ADVANCED TECHNOLOGY PROVIDING CLEARLY SUPERIOR IMAGING

## TRADITIONAL METHODS AND RESULTS:

Continuous Wave (CW) Pulse

Full Spectrum CHIRP

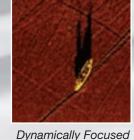

Single Pulse

Multi-Pulse

Non-Dynamically Focused

Yaw Effects

Software Compensated EdgeTech is the industry leader in the design and development of advanced imaging sonar systems. Only EdgeTech offers a set of unique and exciting underwater imaging technologies including Full Spectrum® CHIRP Processing, Multi-Pulse technology, Dynamic Aperture and Dynamically Focused Arrays. Our proprietary Full Spectrum<sup>®</sup> CHIRP Processing enhances long range resolutions through improved signal-to-noise ratios. Multi-Pulse technology puts up to 4 pulses in the water simultaneously, thereby enabling either a 4 times survey speed increase over conventional side scan sonar systems, or a marked increase of pings on target, which leads to superior feature detection. EdgeTech's exclusive Dynamically Focused Arrays sharpen resolutions in the far field and enable better target identifications at longer ranges.

In addition to these pioneering technologies, our expertise in telemetry, compact & low-power electronics, modular designs and software programming allows us to provide unique and tailored solutions for platforms that include towed bodies, powered towed bodies, remotely operated vehicles (ROV), unmanned surface vehicles (USV), and unmanned underwater vehicles (UUV). We also have vast knowledge of acoustic positioning, navigation and control technologies that can easily be incorporated into any of EdgeTech solutions. For side scan sonar, sub-bottom profiling, and bathymetric solutions, either individually or in combinations, EdgeTech provides Clearly Superior Imaging.

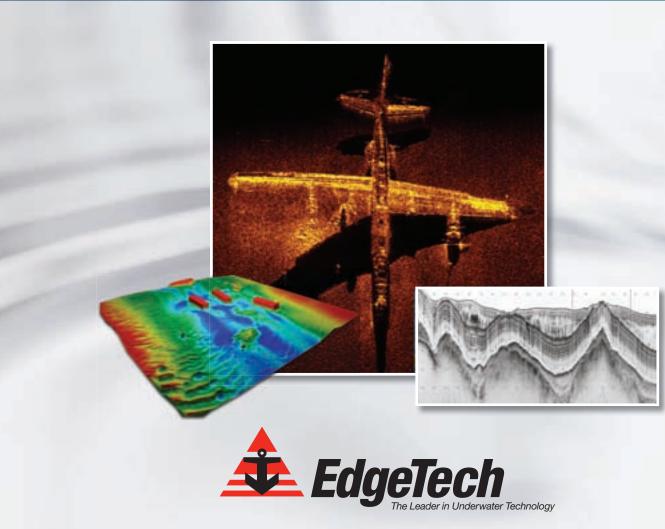

### Acoustic Releases | USBL | MRU | Side Scan Sonar | Sub-bottom Profilers | Bathymetry | AUV & ROV Sonars | Combined & Customized Solutions
